A PROJECT FILE FOR

"BASIC C PROGRAMMING THEORY & LAB"

OF

"COMPUTER PROGRAMMING"

Submitted To: GURPREET KAUR
Submitted By: mukul dev yagyavalkya
University Roll No: 2315001397
Roll No & Section: 39, AU1

WEEK 1

Q. 1 Write a program to accept height and base of triangle and calculate area of Triangle Note: area =(h*b)/2

```
#include <stdio.h> int
main()
{
   int height, width, area; printf("Please enter
height of the triangle: \n"); scanf("%d",
&height); printf("Please enter width of the
triangle: \n"); scanf("%d", &width); area =
(height * width) / 2; printf("The area of the
triangle is: %d", area);
}
```

```
Q. 2 Write a program to accept radius of circle and calculate area of circle Note:
area =pi * r<sup>2</sup>
#include <stdio.h> int
main()
  int radius, area; printf("Please enter radius
of the circle: \n"); scanf(" %d", &radius);
area = 3.14 * radius * radius; printf("The
area of the circle is: %d", area);
}
Q. 3 Write a program to find the lowest marks of three students using conditional operator.
#include <stdio.h> int
main()
  int marks1, marks2, marks3; printf("Please
enter marks of student 1: \n"); scanf(" %d",
&marks1); printf("Please enter marks of
student 2: \n"); scanf("%d", &marks2);
printf("Please enter marks of student 3: \n");
scanf("%d", &marks3); if (marks1 < marks2
&& marks1 < marks3)
  {
     printf("Student 1 has the lowest marks");
  else if (marks2 < marks1 && marks2 < marks3)
     printf("Student 2 has the lowest marks");
  }
else
     printf("Student 3 has the lowest marks");
  }
}
```

Q. 4 Write a program to Calculate Compound Interest.

```
#include <stdio.h>
#include <math.h> int
main()
{
  float principal, rate, time, compoundInterest; printf("Enter
principal amount: "); scanf("%f", &principal); printf("Enter
rate of interest (in percentage): "); scanf("%f", &rate);
printf("Enter time period (in years): "); scanf("%f", &time);
rate = rate / 100; compoundInterest = principal * pow(1 +
rate, time) - principal; printf("Compound Interest = %.2f\n",
compoundInterest);
  return 0;
}
Q. 5 Write a program to Calculate Cube of a Number.
#include <stdio.h> int
main()
  int number = 2; int cube =
number ^ 3; int cube1 =
pow(number, 3);
printf("\nCube is %d", cube1);
}
```

WFFK 2

Q.1 Interchange two values using Assignment Operator:

```
#include <stdio.h> int main ()  \{ \text{ int a, b; printf("Enter two values:} \n"); } \\ \text{scanf("%d %d", &a, &b); } \\ \alpha = \alpha + b; \\ b = \alpha - \alpha + \beta = \alpha + \beta
```

```
b; a = a - b; printf("Interchanged values:
%d %d\n'', a, b);
  return 0;
}
Q.2 Interchange two values using Arithmetic Operator:
#include <stdio.h>
  int main ()
{ int a, b; printf("Enter two
values:\n"); scanf("%d %d",
&a, &b);
  a = a * b; b = a / b; a = a / b;
  printf("Interchanged values: %d %d\n", a,
  b);
  return 0:
}
Q .3 Interchange two values using Bitwise Operator:
#include <stdio.h>
  int main ()
{ int a, b; printf("Enter two values:\n");
scanf("%d %d", &a, &b); a = a \land b; b = a \land
b; a = a \land b; printf("Interchanged values:
%d %d\n", a, b);
  return 0:
}
Q .4 Find the size of all data types:
#include <stdio.h>
  int main()
{
  printf("Size of int: %lu bytes\n", sizeof(int)); printf("Size of
float: %lu bytes\n", sizeof(float)); printf("Size of char: %lu
bytes\n", sizeof(char)); printf("Size of double: %lu bytes\n",
sizeof(double)); printf("Size of long double: %lu bytes\n",
```

```
sizeof(long double)); printf("Size of short int: %lu bytes\n",
sizeof(short int)); return 0;
}
Q.5 Check whether input number is even or odd without using arithmetic operators:
#include <stdio.h>
  int main()
{
  int num; printf("Enter a number:
"); scanf("%d", &num); if (num
& 1){
        printf("The number is
odd.n'';
   }
  else{ printf("The number is
even.\n");
   }
  return 0;
}
                                               WEEK 3
Q.1 Check whether a given number is even or odd:
#include <stdio.h>
  int main()
{
  int num; printf("Enter a
number: "); scanf("%d", &num);
if (num \% 2 == 0){
                  printf("The
number is even.\n");
  } else{
            printf("The number
is odd.n'';
  }
```

```
return 0;
}
Q .2 Check whether a given number is positive or negative:
#include <stdio.h>
  int main()
{
  int num; printf("Enter a number: ");
scanf("%d", &num); if (num > 0){
printf("The number is positive.\n");
  }
  else if (num < 0){ printf("The
number is negative.\n");
  }
else
    printf("The number is zero.\n");
  }
  return 0;
}
Q .3 Check whether a given year is a leap year or not:
#include <stdio.h>
  int main()
{ int year; printf("Enter a year: "); scanf("%d", &year);
if ((year % 4 == 0 && year % 100 != 0) | | (year % 400 == 0)){
printf("%d is a leap year.\n", year);
                printf("%d is not a leap
  } else{
year.\n", year);
  }
  return 0;
}
Q .4 Find the largest of three numbers :
#include <stdio.h>
  int main()
```

```
{
  int num1, num2, num3;
printf("Enter three numbers: ");
scanf("%d %d %d", &num1, &num2,
num3; if (num1 >= num2 &&
num1 >= num3){
                   printf("The
largest number is %d.\n", num1);
  else if (num2 >= num1 && num2 >= num3){
printf("The largest number is %d.\n", num2);
               printf("The largest number is
  } else{
%d.\n", num3);
  }
  return 0;
}
Q .5 Read temperature and display a message :
#include <stdio.h>
  int main()
{
  float temperature; printf("Enter the
temperature in centigrade: "); scanf("%f",
&temperature); if (temperature < 0){</pre>
printf("Freezing weather\n");
  }
  else if (temperature >= 0 && temperature <= 10){
printf("Very Cold weather\n");
  }
  else if (temperature > 10 && temperature <= 20){
printf("Cold weather\n");
  }
  else if (temperature > 20 && temperature <= 30){
printf("Normal in Temp\n");
  else if (temperature > 30 && temperature <= 40){
```

```
printf("Its Hotn");
  } else{
             printf("It's
Very Hot\n");
  }
  return 0;
}
Q .6 Display a digit in words :
#include <stdio.h>
  int main()
{ int digit; printf("Enter a
digit (0-9):"); scanf("%d",
&digit); switch (digit)
  {
  case 0:
printf("Zero\n");
break; case 1:
printf("One\n");
break; case 2:
printf("Two\n");
break; case 3:
printf("Three\n");
break; case 4:
printf("Four\n");
break; case 5:
printf("Five\n");
break; case 6:
printf("Six\n");
break; case 7:
printf("Seven\n");
break; case 8:
printf("Eight\n");
break; case 9:
printf("Nine\n");
break; default:
    printf("Invalid digit\n");
  }
```

```
return 0;
}
Q .7 Simple Calculator using switch case:
#include <stdio.h> int
main()
  char operator; double num1,
num2, result; printf("Enter an
operator (+, -, *, /): "); scanf(" %c",
&operator); printf("Enter two
numbers: "); scanf("%lf %lf", &num1,
&num2); switch (operator)
  case '+': result =
num1 + num2; break;
case '-':
    result = num1 - num2;
break; case '*':
    result = num1 * num2;
break; case '/':
    result = num1 / num2;
break; default:
    printf("Invalid operator\n");
return 1; // Exit with an error code
  }
  printf("Result: %.2lf\n", result);
return 0;
Q .8 Calculate the Area of Rectangle / Circle / Triangle:
#include <stdio.h>
  int main()
{
```

```
char choice; double area; printf("Choose a shape (R for
Rectangle, C for Circle, T for Triangle): "); scanf("%c", &choice);
switch (choice)
  {
  case 'R':
case 'r':
  {
    double length, width; printf("Enter length
and width of the rectangle: "); scanf("%lf %lf",
&length, &width); area = length * width;
break;
 }
  case 'C':
case 'c':
  {
    double radius; printf("Enter the
radius of the circle: "); scanf("%If",
radius; break;
 }
  case 'T':
case 't':
  {
    double base, height; printf("Enter the base
and height of the triangle: "); scanf("%lf %lf", &base,
&height);
    area = 0.5 * base * height;
break;
  }
  default:
    printf("Invalid choice\n");
return 1; // Exit with an error code
 }
  printf("Area: %.2lf\n", area);
return 0;
Q .9 Calculate the sum and average of positive numbers :
```

```
#include <stdio.h>
  int main()
  int num, sum = 0, count = 0;
while (1)
  {
    printf("Enter a number (enter a negative number to stop): ");
scanf("%d", &num);
                     if (num < 0)
    {
break;
    }
    sum += num;
count++;
  }
  if (count > 0)
    double average = (double)sum / count;
printf("Sum: %d\n", sum); printf("Average:
%.2lf\n", average);
  }
else
    printf("No positive numbers entered.\n");
  }
  return 0;
}
Q.10 Design a digital clock:
#include <stdio.h>
  int main()
{
  int hours, minutes, seconds; printf("Enter time in HH:MM:SS format: "); scanf("%d:%d:%d", &hours,
&minutes, &seconds); if (hours >= 0 && hours <= 23 && minutes >= 0 && minutes <= 59 && seconds
>= 0 && seconds <= 59)
  {
```

```
printf("Time entered: %02d:%02d:%02d\n", hours, minutes, seconds);
  }
else
    printf("Invalid time format.\n");
return 1; // Exit with an error code
  }
  // Update time every second for a simulated clock
  while (1)
    printf("%02d:%02d:%02d\n", hours, minutes, seconds); sleep(1); // Sleep for 1 second
(Note: sleep() function may vary depending on the system) seconds++;
                                                                               if (seconds
== 60)
    {
      seconds = 0;
minutes++; if
(minutes == 60)
         minutes = 0;
hours++;
(hours == 24)
         {
hours = 0;
        }
      }
    }
  return 0;
Q.11 Find the sum of digits of a number until a single digit is occurred:
#include <stdio.h>
  int main()
{
  int num, sum = 0;
printf("Enter a number: ");
scanf("%d", &num); while
(num > 0 | sum > 9)
```

```
if (num == 0)
       num = sum;
sum = 0;
    }
    sum += num % 10;
num = 10;
  }
  printf("Sum of digits until a single digit is occurred: %d\n", sum);
return 0;
}
                                                 WEEK 4
Q.1 Print multiplication table of a number:
#include <stdio.h>
  int main()
  int num; printf("Enter a number: ");
scanf("%d", &num); printf("Multiplication
table of %d:\n", num); for (int i = 1; i \le 10;
++i)
  {
    printf("%d x %d = %d\n", num, i, num * i);
  }
  return 0;
}
Q .2 Calculate factorial of a number:
#include <stdio.h>
  int main()
```

```
{
  int num; long long
factorial = 1; printf("Enter
a number: "); scanf("%d",
&num); if (num < 0)
  {
    printf("Factorial is not defined for negative numbers.\n");
  }
else
    for (int i = 1; i \le num; ++i)
    {
factorial *= i;
    }
    printf("Factorial of %d = %Id\n", num, factorial);
  }
  return 0;
}
Q .3 Check whether a number is palindrome or not:
#include <stdio.h>
  int main()
{
  int num, originalNum, reversedNum = 0, remainder;
printf("Enter a number: "); scanf("%d", &num);
originalNum = num;
  while (num != 0)
    remainder = num % 10; reversedNum =
reversedNum * 10 + remainder; num /= 10;
  }
  if (originalNum == reversedNum) printf("%d is
a palindrome.\n", originalNum); else
printf("%d is not a palindrome.\n", originalNum);
return 0;
}
```

```
Q .4 Count frequency of digits in each number :
#include <stdio.h>
  int main()
  int num, digit; int frequency[10] = {0}; // Array to store the
frequency of each digit printf("Enter a number: "); scanf("%d",
&num); while (num!=0)
  {
    digit = num % 10;
frequency[digit]++;
num = 10;
  }
  printf("Digit Frequency:\n");
for (int i = 0; i < 10; ++i)
  {
    if (frequency[i] > 0)
    {
      printf("%d: %d times\n", i, frequency[i]);
    }
  }
  return 0;
}
Q.5 Find HCF(GCD) and LCM of two numbers:
#include <stdio.h>
  int main()
  int num1, num2, temp, gcd, lcm;
printf("Enter two numbers: "); scanf("%d
%d", &num1, &num2);
  // Find GCD
while (num2 != 0)
  {
```

```
temp = num2;
num2 = num1 % num2;
num1 = temp;
  }
  gcd = num1; // Find LCM
lcm = (num1 * num2) / gcd;
printf("GCD: %d\n", gcd);
printf("LCM: %d\n", lcm);
return 0;
}
Q .6 Print all prime numbers between 1 to n:
#include <stdio.h>
int isPrime(int num)
  if (num \le 1)
    return 0; // Not prime
  for (int i = 2; i * i <= num; ++i)
  {
    if (num \% i == 0)
       return 0; // Not prime
    }
  }
  return 1; // Prime
}
int main()
{ int n; printf("Enter the value of n: ");
scanf("%d", &n); printf("Prime numbers between
1 and %d:\n", n);
  for (int i = 2; i \le n; ++i)
  {
     if
(isPrime(i))
```

```
{
printf("%d", i);
    }
  }
  return 0;
}
Q .7 Print Fibonacci series up to n terms :
#include <stdio.h>
  int main()
  int n, firstTerm = 0, secondTerm = 1, nextTerm;
printf("Enter the number of terms: ");
scanf("%d", &n); printf("Fibonacci series up to
%d terms:\n", n); for (int i = 1; i <= n; ++i)
  {
    printf("%d, ", firstTerm);
nextTerm = firstTerm + secondTerm:
firstTerm = secondTerm;
secondTerm = nextTerm;
  }
  return 0:
}
Q.8 Print Armstrong numbers from 1 to n and check a given number is Armstrong or not:
#include <stdio.h> #include
<math.h>
  int is Armstrong (int num)
  int originalNum, digit, n = 0, result = 0;
originalNum = num; while
(originalNum!=0)
     originalNum /= 10;
```

```
++n;
  originalNum = num;
while (originalNum!=0)
  {
     digit = originalNum % 10;
result += pow(digit, n);
originalNum /= 10;
  }
  return (result == num);
}
int main()
{ int n; printf("Enter the value of n: "); scanf("%d",
&n); printf("Armstrong numbers between 1 and
%d:\n", n);
  for (int i = 1; i \le n; ++i)
    if (isArmstrong(i))
    {
printf("%d", i);
    }
  printf("\nEnter a number to check if it's Armstrong: ");
scanf("%d", &n); if (isArmstrong(n))
  {
     printf("%d is an Armstrong number.\n", n);
  }
else
  {
    printf("%d is not an Armstrong number.\n", n);
  }
  return 0;
}
Q.9 Print all Perfect numbers between 1 to n and check a given number is Perfect or not:
#include <stdio.h>
```

```
int
  isPerfect(int num)
  int sum = 0; for (int i = 1; i
<= num / 2; ++i)
    if (num \% i == 0)
sum += i;
    }
  }
  return (sum == num);
}
int main()
{ int n; printf("Enter the value of n: ");
scanf("%d", &n); printf("Perfect numbers between
1 and %d:\n", n);
  for (int i = 1; i \le n; ++i)
  { if
(isPerfect(i))
    {
printf("%d", i);
    }
  }
  printf("\nEnter a number to check if it's Perfect: ");
scanf("%d", &n); if (isPerfect(n))
  {
    printf("%d is a Perfect number.\n", n);
  }
else
     printf("%d is not a Perfect number.\n", n);
  }
  return 0;
}
```

```
Q.10 Print all Strong Numbers between 1 to n:
#include <stdio.h>
int factorial(int num)
  if (num == 0 | | num == 1)
  {
return 1;
  }
else
  {
    return num * factorial(num - 1);
  }
}
int isStrong(int num)
{
  int originalNum, digit, sum = 0;
originalNum = num; while
(originalNum!=0)
  {
    digit = originalNum % 10;
sum += factorial(digit);
originalNum /= 10;
  }
  return (sum == num);
}
int main()
{ int n; printf("Enter the value of n: ");
scanf("%d", &n); printf("Strong numbers between
1 and %d:\n", n);
  for (int i = 1; i \le n; ++i)
  { if
(isStrong(i))
printf("%d", i);
```

```
}
  return 0;
}
                                                  WEEK 5
Q. Write a program to print the following patterns:
A.
#include <stdio.h>
  int main()
{ for (int j = 0; j < 4;
j++)
    // no. of columns
for (int i = 0; i < 5; i++)
    {
      // no. of rows
printf("*");
    // new line character
printf("\n");
  }
}
#include <stdio.h> int
main()
{ for (int j = 0; j < 4;
j++)
 {
       for (int i = 0; i < 5;
```

j++)

```
{
            printf("%d",
i + 1);
printf("\n");
 }
}
C. #include
<stdio.h> int
main()
{ for (int j = 0; j < 4;
j++)
 { for (int i = 0; i < j + 1;
i++)
        printf("%d",
  {
i + 1);
   }
printf("\n");
 }
}
D.
       #include
<stdio.h> int
main()
{ for (int j = 0; j < 4;
j++)
    // no. of columns
for (int i = 0; i < j + 1; i++)
    {
      // no. of rows
printf("%d", j + 1);
    // new line character
printf("\n");
  }
}
```

```
E.
#include <stdio.h> int
main()
{ for (int j = 0; j < 4;
j++)
 { for (int i = 0; i < j + 1;
j++)
printf("*");
  }
printf("\n");
 }
}
F.
#include <stdio.h> int
main()
{ for (int j = 0; j < 4;
j++)
 { for (int k = 4; k > j;
k---)
  {
printf("");
printf("");
    }
         for (int i = 0; i < j +
1; i++)
       printf("%c ", i
    {
+ 65);
    }
printf("\n"); }
G. #include
<stdio.h> int
main()
```

```
{ for (int j = 0; j < 4;
j++)
{ for (int i = 0; i < j + 1;
i++)
 { printf("%d ", i +
1 + j);
 }
printf("\n'');
}
}
Н.
#include <stdio.h> int
main()
{ for (int j = 0; j < 5;
j++)
{ for (int i = 0; i < j + 1;
i++)
{ if (i %
2 == 0)
{
printf("1 "); }
else {
printf("0 ");
 }
 }
printf("\n");
}
}
#include <stdio.h> int
main()
{ for (int j = 0; j < 4;
j++)
{
     for (int k = 4; k > j;
k--)
```

```
{
printf("");
           for (int i = 0; i < j +
     }
1; i++)
printf(" *");
     }
printf("\n");
  } for (int j = 0; j < 4;
j++)
  { for (int k = 4; k > j;
k--)
     {
printf(" ");
     }
          for (int i = j + 1; i
> 0; i--)
     {
printf(" *");
     }
printf("\n");
  }
}
```

WEEK 6

Q.1 Menu driven program to insert and delete elements of kth position in an array:

```
}
  printf("\n");
}
void insertElement(int arr[], int *size, int position, int element)
{ if (*size >=
position)
  {
        for (int i = *size; i >=
position; --i)
             arr[i] =
     {
arr[i - 1];
     }
     arr[position - 1] = element;
     (*size)++;
                   printf("Element inserted
successfully.\n");
  }
else
     printf("Invalid position.\n");
  }
}
void deleteElement(int arr[], int *size, int position)
  if (*size > 0 && position > 0 && position <= *size)
     for (int i = position - 1; i < *size - 1; ++i)
     {
              arr[i] =
arr[i + 1];
     }
     (*size)--;
     printf("Element deleted successfully.\n");
  }
else
  {
     printf("Invalid position.\n");
  }
}
```

```
int main()
{
  int arr[100], size, choice, position, element;
printf("Enter the size of the array: "); scanf("%d",
&size);
  printf("Enter %d elements: ", size);
for (int i = 0; i < size; ++i)
  {
    scanf("%d", &arr[i]);
  }
  do
     printf("\nMenu:\n");
printf("1. Display Array\n");
printf("2. Insert Element\n");
printf("3. Delete Element\n");
printf("4. Exit\n"); printf("Enter
your choice: "); scanf("%d",

}
Q .2 Print the biggest and smallest element in an array:
#include <stdio.h>
  int main()
{ int arr[100], size, i; printf("Enter
the size of the array: "); scanf("%d",
&size); printf("Enter %d elements: ",
size); for (i = 0; i < size; ++i)
  {
     scanf("%d", &arr[i]);
  // Assume the first element is both the smallest and largest
int smallest = arr[0], largest = arr[0]; for (i = 1; i < size; ++i)
  {
        if (arr[i] <
smallest)
     {
             smallest
= arr[i];
    }
          if (arr[i] >
largest)
    {
             largest
= arr[i];
    }
  printf("Smallest Element: %d\n", smallest);
printf("Largest Element: %d\n", largest);
return 0;
Q .3 Program to print the sum and average of an array:
#include <stdio.h>
  int main()
```

```
{ int arr[100], size, i, sum = 0;
printf("Enter the size of the array: ");
scanf("%d", &size); printf("Enter %d
elements: ", size); for (i = 0; i < size);
++i)
     scanf("%d", &arr[i]);
sum += arr[i];
  }
  double average = (double)sum / size; printf("Sum
of Array Elements: %d\n", sum); printf("Average of
Array Elements: %.2lf\n", average);
  return 0;
}
Q .4 Program to sort an array using bubble sort :
#include <stdio.h>
  void bubbleSort(int arr[],
int size)
{ int temp, i, j; for (i =
0; i < size - 1; ++i)
       for (j = 0; j < size - i - 1;
  {
++j)
    {
             if (arr[j] >
arr[j + 1]
       {
          // Swap the elements if they are in the wrong order
         temp = arr[j];
arr[j] = arr[j + 1];
arr[j + 1] = temp;
       }
    }
  }
}
```

```
int main()
{ int arr[100], size, i; printf("Enter
the size of the array: "); scanf("%d",
&size);
  printf("Enter %d elements: ", size);
for (i = 0; i < size; ++i)
     scanf("%d", &arr[i]);
  bubbleSort(arr, size);
printf("Sorted Array: "); for
(i = 0; i < size; ++i)
        printf("%d",
  {
arr[i]);
  }
  return 0;
}
Q.5 Program to search an element using linear search as well as binary search:
#include <stdio.h>
  int linearSearch(int arr[], int size, int key)
{ for (int i = 0; i < size;
++i)
        if (arr[i] ==
  {
key)

return i;
     }
  return -1; // Element not found
int binarySearch(int arr[], int size, int key)
  int low = 0, high = size - 1, mid;
while (low <= high)
  {
```

```
mid = (low + high) / 2;
if (arr[mid] == key)
     {
       return mid;
     }
     else if (arr[mid] < key)
       low = mid + 1;
     }
else
     {
       high = mid - 1;
    }
  return -1; // Element not found
}
int main()
{ int arr[100], size, key, result; printf("Enter the size of the array: ");
scanf("%d", &size); printf("Enter %d elements (in sorted order for
binary search): ", size);
  for (int i = 0; i < size; ++i)
     scanf("%d", &arr[i]);
  printf("Enter the element to search: ");
scanf("%d", &key); result =
linearSearch(arr, size, key); if (result !=
-1)
     printf("Linear Search: Element found at index %d.\n", result);
  }
else
  {
     printf("Linear Search: Element not found.\n");
  }
```

```
result = binarySearch(arr, size, key);
if (result != -1)
  {
     printf("Binary Search: Element found at index %d.\n", result);
  }
else
     printf("Binary Search: Element not found.\n");
  }
  return 0;
}
Q .6 Program to analyze an array of 20 integer inputs :
#include <stdio.h>
  int main()
{
  int arr[20], positiveCount = 0, negativeCount = 0, oddCount = 0, evenCount = 0, zeroCount = 0;
printf("Enter 20 integer inputs: "); for (int i = 0; i < 20; ++i)
  {
    scanf("%d", &arr[i]);
     if (arr[i] >
0)
       positiveCount++;
           else if
    }
(arr[i] < 0)
       negativeCount++;
    }
else
       zeroCount++;
    if (arr[i] \% 2 == 0)
       evenCount++;
else
```

```
{
       oddCount++;
    }
  printf("Number of positive numbers: %d\n", positiveCount);
printf("Number of negative numbers: %d\n", negativeCount);
printf("Number of odd numbers: %d\n", oddCount); printf("Number
of even numbers: %d\n", evenCount); printf("Number of zeros:
%d\n", zeroCount);
  return 0;
}
Q .7 Split an array into middle and store in two different arrays :
#include <stdio.h>
  int main()
{
  int arr[10], size = 10, middle = size / 2; int
firstArray[middle], secondArray[size - middle];
printf("Enter 10 elements: "); for (int i = 0; i < size;
++i)
     scanf("%d", &arr[i]);
  // Split the array into two
for (int i = 0; i < middle; ++i)
  {
        firstArray[i] =
arr[i];
  }
  for (int i = middle; i < size; ++i)
     secondArray[i - middle] = arr[i];
  // Display the initial array
printf("Initial array: ");
                       for
(int i = 0; i < size; ++i)
```

```
{
        printf("%d",
arr[i]);
  }
  printf("\n");
  // Display the split arrays
printf("After splitting:\n");
printf("First Array: "); for (int
i = 0; i < middle; ++i)
        printf("%d",
  {
firstArray[i]);
  }
  printf("\n"); printf("Second
Array: "); for (int i = 0; i < size -
middle; ++i)
  {
     printf("%d", secondArray[i]);
  printf("\n");
return 0;
}
Q.8 Program to count frequency of each element in an array:
#include <stdio.h>
  int main()
{ int arr[20], size, freq[20] = \{0\};
printf("Enter the size of the array: ");
scanf("%d", &size); printf("Enter %d
elements: ", size); for (int i = 0; i <
size; ++i)
  {

}
                                                WFFK 8
Q.1 Program to create, initialize, and use pointers:
#include <stdio.h>
  int main()
  int num = 10;
  int *ptr;
  // Create and initialize a pointer
ptr = #
  // Use the pointer to access the value
printf("Value of num: %d\n", *ptr);
return 0;
}
Q .2 Program to add two numbers using pointers :
#include <stdio.h>
  int main()
{
  int num1, num2, sum;
  int *ptr1, *ptr2;
  // Input two numbers printf("Enter
two numbers: "); scanf("%d %d",
&num1, &num2); // Create pointers
```

```
and initialize them ptr1 = &num1;
ptr2 = &num2;
  // Add the numbers using pointers
  sum = *ptr1 + *ptr2; //
  Display the result
  printf("Sum: %d\n",
  sum);
  return 0;
}
Q .3 Program to swap two numbers using pointers:
#include <stdio.h> void
swap(int *a, int *b)
  int temp = *a;
*a = *b;
  *b = temp;
}
int main()
{
  int num1, num2; // Input two numbers
printf("Enter two numbers: "); scanf("%d %d",
&num1, &num2); // Display original numbers
printf("Original numbers: %d, %d\n", num1, num2);
  // Swap numbers using pointers swap(&num1,
&num2); // Display swapped numbers
printf("Swapped numbers: %d, %d\n", num1, num2);
  return 0;
Q .4 Program to input and print array elements using pointers:
#include <stdio.h>
  int main()
```

```
{ int
arr[5]; int
*ptr;
  // Input elements using pointers
  printf("Enter 5 array elements: ");
  for (ptr = arr; ptr < arr + 5; ++ptr)
  {
        scanf("%d",
ptr);
  }
  // Display elements using pointers
printf("Array elements: "); for (ptr
= arr; ptr < arr + 5; ++ptr)
        printf("%d",
  {
*ptr);
  }
  printf("\n");
return 0;
}
Q .5 Program to copy one array to another using pointers:
#include <stdio.h> void copyArray(int *source, int
*destination, int size)
{ for (int i = 0; i < size;
++i)
  {
     *(destination + i) = *(source + i);
  }
}
int main()
  int sourceArray[5] = \{1, 2, 3, 4, 5\};
int destinationArray[5]; int size =
5;
  // Copy array using pointers
copyArray(sourceArray, destinationArray, size);
```

```
// Display the original and copied arrays
printf("Source Array: "); for (int i = 0; i < size; ++i)</pre>
  {
     printf("%d", sourceArray[i]);
  }
  printf("\n");
  printf("Copied Array: ");
  for (int i = 0; i < size; ++i)
     printf("%d", destinationArray[i]);
  printf("\n");
return 0;
}
Q .6 Program to swap two arrays using pointers:
#include <stdio.h> void swapArrays(int
*arr1, int *arr2, int size)
{ for (int i = 0; i < size;
++i)
     int temp = *(arr1 + i);
     *(arr1 + i) = *(arr2 + i);
     *(arr2 + i) = temp;
  }
}
int main()
\{ int arr1[5] = \{1, 2, 3, 4, \}
5; int arr2[5] = {6, 7, 8, 9,
10); int size = 5;
  // Swap arrays using pointers
swapArrays(arr1, arr2, size); //
Display the swapped arrays
printf("Swapped Array 1:");
```

```
for (int i = 0; i < size; ++i)
       printf("%d",
arr1[i]);
  }
  printf("\n");
printf("Swapped Array 2: ");
for (int i = 0; i < size; ++i)
         printf("%d",
arr2[i]);
  }
  printf("\n");
return 0;
}
Q .7 Program to reverse an array using pointers :
#include <stdio.h> void
reverseArray(int *arr, int size)
{ int *start = arr; int
*end = arr + size - 1;
while (start < end)
  {
     int temp = *start;
*start = *end;
     *end = temp;
    ++start;
     --end;
  }
}
int main()
\{ int arr[5] = \{1, 2, 3, 4, \}
5; int size = 5;
  // Reverse array using pointers
reverseArray(arr, size); //
Display the reversed array
printf("Reversed Array: "); for
(int i = 0; i < size; ++i)
```

```
{
         printf("%d",
arr[i]);
  }
  printf("\n");
return 0;
}
Q .8 Program to add two matrices using pointers:
#include <stdio.h> void addMatrices(int *mat1, int *mat2, int
*result, int rows, int cols)
{ for (int i = 0; i < rows;
++i)
  {
        for (int j = 0; j < cols;
++j)
     {
       *((result + i * cols) + j) = *((mat1 + i * cols) + j) + *((mat2 + i * cols) + j);
     }
  }
}
int main()
\{ int mat1[2][2] = \{\{1, 2\}, \{3, \}\} \}
4}}; int mat2[2][2] = {\{5, 6\},
{7, 8}}; int result[2][2]; int
rows = 2, cols = 2;
  // Add matrices using pointers addMatrices(&mat1[0][0],
&mat2[0][0], &result[0][0], rows, cols);
  // Display the result matrix
printf("Result Matrix:\n"); for
(int i = 0; i < rows; ++i)
        for (int j = 0; j < cols;
++j)
     {
              printf("%d",
result[i][j]);
```

```
}
printf("\n");
}
return 0;
}
```

}

WEEK 9

```
Q.1 Program to search a string:
#include <stdio.h>
#include <string.h>
int main()
{
  char str[50], key[20]; // Input
string and key to search
printf("Enter a string: "); gets(str);
printf("Enter the search key: ");
gets(key);
  // Search for the key in the string
char *result = strstr(str, key); if
(result != NULL)
    printf("Key found at index: %d\n", result - str);
  }
else
  {
    printf("Key not found.\n");
  }
  return 0;
```

```
Q .2 Program to reverse words in a string:
#include <stdio.h>
#include <string.h>
int main()
  char str[100]; //
Input string
printf("Enter a string: ");
gets(str);
  // Reverse words in the string
char *token = strtok(str, " "); while
(token != NULL)
     strrev(token);
printf("%s", token);
                     token
= strtok(NULL, "");
  return 0;
}
Q .3 Program to count vowels, consonants, etc.in a string:
#include <stdio.h> #include
<ctype.h>
  int main()
{
  char str[100]; int vowels = 0, consonants = 0, digits
= 0, spaces = 0;
  // Input string
printf("Enter a string: ");
gets(str);
  // Count vowels, consonants, digits, and spaces
  for (int i = 0; str[i] != '\0'; ++i)
     char ch = tolower(str[i]); if (ch == 'a' \mid | ch == 'e' \mid | ch
== 'i' |  | ch == 'o' |  | ch == 'u')
```

```
vowels++;
    }
     else if (isalpha(ch))
       consonants++;
    }
     else if (isdigit(ch))
    {
digits++;
    }
     else if (isspace(ch))
     {
       spaces++;
    }
  printf("Vowels: %d\n", vowels);
printf("Consonants: %d\n", consonants);
printf("Digits: %d\n", digits);
printf("Spaces: %d\n", spaces); return 0;
}
Q .4 Program to separate characters in a given string:
#include <stdio.h>
#include <string.h>
int main()
{ char str[50]; //
Input string
printf("Enter a string: ");
gets(str);
  // Separate characters in the string
  for (int i = 0; str[i] != '\0'; ++i)
       printf("%c ",
str[i]);
  }
  return 0;
Q.5 Program to concatenate two strings and add a space between them:
```

```
#include <stdio.h>
#include <string.h>
int main()
  char str1[50], str2[50]; //
Input two strings
printf("Enter the first string: ");
gets(str1);
  printf("Enter the second string: ");
gets(str2);
  // Concatenate the strings with a space in between
  strcat(str1, " "); strcat(str1, str2); //
Display the result printf("Concatenated
String: %s\n", str1); return 0;
Q .6 Program to toggle the case of characters in a string:
#include <stdio.h>
#include <string.h> int
main()
  char str[100]; //
Input string
printf("Enter a string: ");
gets(str);
  // Toggle the case of characters in the string
  for (int i = 0; str[i] != '\0'; ++i)
  { if
(isupper(str[i]))
    {
       str[i] =
tolower(str[i]);
          else if
(islower(str[i]))
             str[i] =
toupper(str[i]);
```

```
}
  }
         Display
  //
                    the result
printf("Toggled Case: %s\n", str);
return 0;
Q .7 Program to check if two strings are identical without using string functions: #include <stdio.h>
                                                                                                               int
compareStrings(char str1[], char str2[])
{ int i = 0; while (str1[i] != '\0' | |
str2[i] != '\0')
  { if (str1[i] != str2[i]){
return 0; // Not identical
    }
i++;
  }
  return 1;
}
int main()
  char str1 [50], str2 [50]; // Input
two strings printf("Enter the first
string: "); gets(str1);
printf("Enter the second string: ");
gets(str2);
  // Check if the strings are identical
if (compareStrings(str1, str2))
  {
     printf("Identical\n");
  }
else
     printf("Not Identical\n");
  }
  return 0;
}
Q .8 Program to sort a list of student names in alphabetical order:
```

```
#include <stdio.h> #include <string.h>
void sortStrings(char names[][50], int n) {
  char temp[50];
  for (int i = 0; i < n - 1; ++i)
        for (int j = i + 1; j < n;
++j)
       if (strcmp(names[i], names[j]) > 0)
         strcpy(temp, names[i]);
strcpy(names[i], names[j]);
strcpy(names[j], temp);
       }
    }
  }
}
int main()
{
   int
n;
  // Input number of students
printf("Enter the number of students: ");
scanf("%d", &n); char
studentNames[n][50]; // Input student
names printf("Enter the names of
students:\n");
  for (int i = 0; i < n; ++i)
     scanf("%s", studentNames[i]);
  }
  // Sort student names in alphabetical order
sortStrings(studentNames, n); // Display the
sorted names printf("Sorted Names:\n");
  for (int i = 0; i < n; ++i)
     printf("%s\n", studentNames[i]);
```

```
}
  return 0;
}
                                                WEEK 10
Q.1 Program to find the length of a string using pointers:
#include <stdio.h> int
findLength(char *str)
  int length = 0;
while (*str!='\0')
    length++;
str++;
  }
  return length;
}
int main()
{
  char str[100]; //
Input string
printf("Enter a string: ");
gets(str);
  // Find and display the length using pointers
printf("Length of the string: %d\n", findLength(str));
return 0;
}
Q.2 Program to copy one string to another using pointers:
#include <stdio.h> void copyString(char
*source, char *destination)
{
```

```
while (*source != '\0')
     *destination = *source;
source++; destination++;
  }
  *destination = '\0'; // Null-terminate the destination string
}
int main()
  char source[50], destination[50];
// Input string to be copied
printf("Enter a string to be copied: ");
gets(source);
  // Copy the string using pointers
copyString(source, destination); //
Display the copied string printf("Copied
string: %s\n", destination); return 0;
}
Q .3 Program to concatenate two strings using pointers:
#include <stdio.h> void
concatenateStrings(char *str1, char *str2)
{ while (*str1 !=
'\0')
  {
str1++;
  }
  while (*str2 != '\0')
    *str1 = *str2;
str1++; str2++;
  }
  *str1 = '\0'; // Null-terminate the concatenated string
}
```

```
int main()
{
  char str1 [50], str2[50];
  // Input two strings
  printf("Enter the first
  string: "); gets(str1);
  printf("Enter the
  second string: ");
  gets(str2);
  // Concatenate the strings using pointers
concatenateStrings(str1, str2); // Display
the concatenated string
printf("Concatenated string: %s\n", str1);
return 0;
}
Q .4 Program to compare two strings using pointers :
#include <stdio.h> int
compareStrings(char *str1, char *str2)
{
  while (*str1 != '\0' && *str2 != '\0')
  {
       if (*str1 !=
*str2)
       return 0; // Not equal
    }
str1++;
str2++;
  if (*str1 == '\0' && *str2 == '\0')
     return 1; // Equal
  return 0; // Not equal
}
```

```
int main()
  char str1 [50], str2 [50]; // Input
two strings printf("Enter the first
string: "); gets(str1);
printf("Enter the second string: ");
gets(str2);
  // Compare the strings using pointers
if (compareStrings(str1, str2))
     printf("Strings are equal.\n");
  }
else
     printf("Strings are not equal.\n");
  }
  return 0;
}
Q .5 Program to find the largest among three numbers using pointers :
#include <stdio.h> void findLargest(int *num1,
int *num2, int *num3)
  int *max = num1;
if (*num2 > *max)
     max = num2;
  if (*num3 > *max)
     max = num3:
  printf("Largest number: %d\n", *max);
}
int main()
```

```
{
  int num1, num2, num3; // Input three
numbers printf("Enter three numbers: ");
scanf("%d %d %d", &num1, &num2, &num3);
  // Find and display the largest using pointers findLargest(&num1,
  &num2, &num3);
  return 0;
}
Q .6 Program to find the largest among three numbers using pointers :
#include <stdio.h> void findLargest(int *num1,
int *num2, int *num3)
{
  int *max = num1:
if (*num2 > *max)
    max = num2;
  if (*num3 > *max)
    max = num3;
  }
  printf("Largest number: %d\n", *max);
}
int main()
  int num1, num2, num3; // Input three
numbers printf("Enter three numbers: ");
scanf("%d %d %d", &num1, &num2, &num3);
// Find and display the largest using pointers
findLargest(&num1, &num2, &num3);
  return 0;
}
Q.7 Program to find the factorial of a number using pointers:
#include <stdio.h> void findFactorial(int num,
long long *factorial)
```

```
{
  *factorial = 1; for (int i =
1; i <= num; ++i)
    *factorial *= i;
  }
}
int main()
{
  int num; long long factorial; // Input a
number printf("Enter a number: ");
scanf("%d", &num); findFactorial(num,
&factorial); printf("Factorial of %d: %lld\n",
num, factorial); return 0;
}
Q .8 Program to print the largest even number present in an array using a pointer to an array :
#include <stdio.h> void
findLargestEven(int *arr, int size)
  int *maxEven = NULL;
  for (int i = 0; i < size; ++i)
       if (*(arr + i) % 2
  {
== 0)
       if (maxEven == NULL | | *(arr + i) > *maxEven)
       {
         maxEven = (arr + i);
       }
    }
  if (maxEven != NULL)
    printf("Largest even number: %d\n", *maxEven);
```

```
}
else
  {
     printf("No even numbers in the array.\n");
  }
}
int main()
{ int
size;
  // Input the size of the array
printf("Enter the size of the array: ");
scanf("%d", &size); int arr[size];
  // Input array elements
printf("Enter the array elements:\n");
  for (int i = 0; i < size; ++i)
     scanf("%d", &arr[i]);
  }
  // Find and display the largest even number using a pointer to an array
findLargestEven(arr, size); return 0; }
Q .9 Program to find the sum of elements of an array using an array of pointers :
#include <stdio.h>
         findSum(int *arr[],
  void
int size)
  int sum = 0; for (int i =
0; i < size; ++i)
  {
     sum += *arr[i];
  printf("Sum of elements: %d\n", sum);
}
int main()
{ int size;
```

```
// Input the size of the array printf("Enter
  the size of the array: "); scanf("%d",
   &size);
  int arr[size];
  // Input array elements
printf("Enter the array elements:\n");
  for (int i = 0; i < size; ++i)
     scanf("%d", &arr[i]);
  // Create an array of pointers to array elements
  int *ptrArr[size]; for
(int i = 0; i < size; ++i)
        ptrArr[i] =
&arr[i];
  }
  // Find and display the sum using an array of pointers
findSum(ptrArr, size); return 0;
}
Q.10 Program to compute simple interest using pointers:
#include <stdio.h> void computeSimpleInterest(float *principal, float *rate, float
*time, float *interest)
  *interest = (*principal * *rate * *time) / 100.0;
}
int main()
{
  float principal, rate, time, interest; //
Input principal amount, rate, and time
printf("Enter principal amount: ");
scanf("%f", &principal); printf("Enter rate
of interest: "); scanf("%f", &rate);
printf("Enter time (in years): "); scanf("%f",
&time);
```

```
// Compute and display simple interest using pointers
  computeSimpleInterest(&principal, &rate, &time, &interest);
  printf("Simple Interest: %.2f\n", interest);
  return 0;
}
Q.11 Program to print the largest even number present in an array using a pointer to an array:
#include <stdio.h> void
findLargestEven(int *arr, int size)
  int *maxEven = NULL;
  for (int i = 0; i < size; ++i)
        if (*(arr + i) % 2
  {
== 0)
       if (maxEven == NULL | | *(arr + i) > *maxEven)
       {
         maxEven = (arr + i);
       }
    }
  if (maxEven != NULL)
     printf("Largest even number: %d\n", *maxEven);
  }
else
  {
     printf("No even numbers in the array.\n");
  }
}
int main()
{ int
size;
  // Input the size of the array
printf("Enter the size of the array: ");
scanf("%d", &size); int arr[size];
```

```
// Input array elements printf("Enter
  the array elements:\n");
  for (int i = 0; i < size; ++i)
  { scanf("%d",
&arr[i]);
  }
  // Find and display the largest even number using a pointer to an array
findLargestEven(arr, size); return 0;
}
                                               WEEK 11
Q.1 Function to return the maximum of three integers:
#include <stdio.h>
  int findMax(int num1, int num2, int num3)
{
  int max = num1;
if (num2 > max)
    max = num2;
  if (num3 > max)
    max = num3;
  }
  return max;
}
int main()
  int num1, num2, num3; // Input three numbers printf("Enter
```

three numbers: "); scanf("%d %d %d", &num1, &num2, &num3);

```
// Find and display the maximum using the function
printf("Maximum number: %d\n", findMax(num1, num2, num3));
  return 0;
}
Q .2 Function to check if a given number is prime or not:
#include <stdio.h>
int isPrime(int num)
{
  if (num \le 1)
  {
    return 0; // Not prime
  for (int i = 2; i * i <= num; ++i)
    if (num \% i == 0)
       return 0; // Not prime
    }
  }
  return 1; // Prime
}
int main()
  int num;
            // Input a
number printf("Enter a
number: "); scanf("%d",
&num);
  // Check and display if the number is prime using the function
if (isPrime(num))
     printf("%d is prime.\n", num);
  }
else
    printf("%d is not prime.\n", num);
```

```
}
  return 0;
}
Q .3 Function to compute the factorial of a non - negative integer : #include <stdio.h>
                                                                                                  long long
computeFactorial(int num)
  long long factorial = 1;
for (int i = 1; i \le num; ++i)
  {
        factorial
*= j;
  }
  return factorial;
}
int main()
{
  int num;
  // Input a non-negative integer
printf("Enter a non-negative integer: ");
scanf("%d", &num);
  // Compute and display the factorial using the function
printf("Factorial of %d: %lld\n", num, computeFactorial(num));
  return 0:
}
Q .4 Function to swap the values of two integers in actual arguments :
#include <stdio.h>
  void swap(int
*a, int *b)
  int temp = *a;
*a = *b;
  *b = temp;
}
int main()
```

```
{
  int num1, num2; // Input
two numbers printf("Enter
two numbers: "); scanf("%d
%d", &num1, &num2); //
Display original numbers
printf("Original numbers: %d,
%d\n'', num1, num2);
  // Swap numbers using the function
swap(&num1, &num2); // Display swapped
numbers printf("Swapped numbers: %d, %d\n",
num1, num2);
  return 0;
}
Q.5 Function to compute the sum and average of an array of integers:
#include <stdio.h> void computeSumAndAverage(int arr[], int size, int
*sum, double *average)
  *sum = 0; for (int i =
0; i < size; ++i)
    *sum += arr[i];
  *average = (double)(*sum) / size;
}
int main()
{ int arr[] = \{1, 2, 3, 4, 5\}; int size = sizeof(arr) / 
sizeof(arr[0]); int sum; double average;
computeSumAndAverage(arr, size, &sum, &average);
printf("Sum: %d\n", sum); printf("Average: %.2lf\n",
average); return 0;
}
```

Q .6 C function to find the GCD(Greatest Common Divisor) of two nonnegative integers using Euclid's algorithm:

```
#include <stdio.h> int
findGCD(int a, int b) {
  while (b != 0)
    int temp = b;
b = a \% b;
= temp;
  }
  return a;
}
int main()
  int num1, num2;
  printf("Enter two nonnegative integers: ");
scanf("%d %d", &num1, &num2); int gcd
= findGCD(num1, num2); printf("GCD:
%d\n'', gcd); return 0;
}
Q.7 C function to check if a given string is a valid palindrome, considering only alphanumeric characters
and ignoring cases:
#include <stdio.h>
#include <ctype.h>
#include <stdbool.h> #include
<string.h> bool
isAlphanumeric(char ch)
  return isalnum(ch) != 0;
}
bool isValidPalindrome(char str[])
\{ int i = 0; int j = 0 \}
strlen(str) - 1;
```

```
while (i < j)
    while (i < j && !isAlphanumeric(str[i]))
    {
i++;
    while (i < j && !isAlphanumeric(str[j]))
j--;
    }
    if (tolower(str[i]) != tolower(str[j]))
    {
             return
false;
    }
j++;
j--;
  }
  return true;
}
int main()
{ char str[50];
printf("Enter a string: ");
gets(str); if
(isValidPalindrome(str))
  {
     printf("Valid Palindrome\n");
  }
else
     printf("Not a Valid Palindrome\n");
  }
  return 0;
Q.8 C function to calculate the sum and difference of two complex numbers:
```

```
#include <stdio.h>
typedef struct
  double real:
  double imag; } Complex; void addComplex(Complex num1,
Complex num2, Complex *result)
  result->real = num1.real + num2.real; result-
>imag = num1.imag + num2.imag;
}
void subtractComplex(Complex num1, Complex num2, Complex *result)
  result->real = num1.real - num2.real; result-
>imag = num1.imag - num2.imag;
}
int main()
{
  Complex num1, num2, sum, diff; printf("Enter the real and imaginary parts
of the first complex number: "); scanf("%lf %lf", &num1.real, &num1.imag);
printf("Enter the real and imaginary parts of the second complex number: ");
scanf("%lf %lf", &num2.real, &num2.imag); addComplex(num1, num2,
&sum); subtractComplex(num1, num2, &diff); printf("Sum: %.2lf + %.2lfi\n",
sum.real, sum.imag); printf("Difference: %.2lf + %.2lfi\n", diff.real, diff.imag);
return 0;
}
H.O.T.S Questions:
Q.9 C function to find the second largest and second smallest elements in an array of integers:
#include <stdio.h> void findSecondLargestAndSmallest(int arr[], int size, int *secondLargest,
int *secondSmallest)
  // Initialize with the maximum and minimum possible values
  *secondLargest = *secondSmallest = arr[0];
  for (int i = 1; i < size; ++i)
```

```
if (arr[i] > *secondLargest)
       *secondLargest = arr[i];
    }
     else if (arr[i] < *secondSmallest)
       *secondSmallest = arr[i];
    }
}
int main()
{ int arr[] = \{5, 3, 8, 1, 6, 2, 7, 4\};
int size = sizeof(arr) / sizeof(arr[0]);
int secondLargest, secondSmallest;
  findSecondLargestAndSmallest(arr, size, &secondLargest, &secondSmallest);
printf("Second Largest: %d\n", secondLargest); printf("Second Smallest:
%d\n", secondSmallest);
  return 0:
}
Q.10 C function to find the number of occurrences of each unique element in an array:
#include <stdio.h>
  void countOccurrences(int arr[],
int size)
{ for (int i = 0; i < size;
++i)
    int count = 1;
    // Check if the element is already counted
    if (arr[i] != -1)
    {
             for (int j = i + 1; j < j
size; ++j)
       {
                  if (arr[i]
== arr[j])
```

```
{ count++; arr[j] = -1;

// Mark the element as counted }

printf("Element %d occurs %d times\n", arr[i], count);
}

int main()

{ int arr[] = {1, 2, 3, 2, 4, 1, 5, 2};
int size = sizeof(arr) / sizeof(arr[0]);
countOccurrences(arr, size);
return 0;
}
```

END SEMESTER PROJECT

Q. Write a program for a voting system that takes name, age & gender into considerations and checks eligibility to vote also gives out result at the end of voting.

```
#include <stdio.h>
#include <conio.h>
#include <ctype.h>
#include <windows.h>

int main()
{
    char gender, choice = 'Y', vote;    char name[25];
    char lastname[25];    int age;    int vote1 = 0, vote2 = 0,
    vote3 = 0, vote4 = 0, vote5 = 0;    while (choice == 'Y')
    {
        tryagain:
            printf("\aPlease choose your gender (M) or (F): ");
        scanf("%s", &gender);
```

```
gender = toupper(gender);
    if (gender == 'M')
       printf("\nMale\n");
    }
    else if (gender == 'F')
       printf("\nFemale\n");
    }
else
       printf("\nPlease enter a valid gender.\n");
goto tryagain;
    }
    printf("\n\aEnter your first name: ");
